

## Earth spike galvanised

The galvanised earth spike or stake is used to earth the electric fence system. A minimum of 3 earth spikes must be knock into the ground near the electric fence at a minimum of 1.5 m apart. Connect these earth spikes to the energizer or the fence using the high tension insulated cable (HT). In areas where earthing conditions are bad you may be required to add a few more earth spikes/stakes along the fence line and connect these back to the energiser.

### Features:

- Hot-dip galvanised with nuts and washers
- Available in both 1.0m and 1.2m lengths
- The double nut and washer allow for a good electrical connection with the HT cables

Earthing kit available, to be used in areas where the earthing conditions are poor. These kits include a conductive earth compound (EA-CEC)

### Specifications:

Finish: Hot dip galvanised

Lengths: 10mm x 1.0m

10mm x 1.2m
